

BY APPLICATION ONLY

PRECISION REGENERATIVE MEDICINE

Most people never find out what is actually limiting them.

DRIPDOK REGENERATIVE WELLNESS

Dr Anthony Close | ASCA · SCSC · Regenerative Health Specialist
BSc Analytical Chemistry · MSc Molecular Genetics

- First hybrid IV NMN protocol in SEA
- USP 797-compliant compounding lab
- Epigenetic & genomic data integration
- At-home delivery — Bali & SEA
- 17-neurotransmitter urine analysis
- Heavy metal toxicity testing
- Custom peptide blend protocols
- Every case reviewed personally

Blood Analysis	Neurotransmitters	Heavy Metals	Epigenetics	Wearable Data	Custom IV
----------------	-------------------	--------------	-------------	---------------	-----------

The consultation is complimentary. The acceptance is not guaranteed.

We work with people whose data gives us something to work with.

DIAGNOSTIC INTELLIGENCE

What We Can Test

Most diagnostic tests answer the question you asked. We are more interested in the question you did not know to ask. The panels below represent what is possible. What is relevant to your biology depends on what your data reveals when we look at it properly.

<p>FOUNDATION</p> <p>Comprehensive Blood Panel</p> <ul style="list-style-type: none"> • FBC, liver, thyroid, hormones • Iron studies, homocysteine, hs-CRP • LDL particle phenotype fractionation • Functional ranges — not hospital thresholds 	<p>BRAIN & MOOD</p> <p>Neurotransmitter Panel</p> <ul style="list-style-type: none"> • 17 neurotransmitters via urine • MSCS laser-guided analysis — best in class • 4 collections throughout the day • Analysed at a certified US laboratory • Ideal for burnout, cognition & mood 	<p>LONGEVITY</p> <p>Epigenetic Age Testing</p> <ul style="list-style-type: none"> • DunedinPACE — rate of aging clock •OMICm Age (Harvard) biological age • SYMPHONYAge organ-level clocks (Yale) • Telomere length percentile
<p>GENOMICS</p> <p>DNA & Genetics Panel</p> <ul style="list-style-type: none"> • Methylation, detoxification pathways • Metabolic & hormonal gene variants • Neurotransmitter synthesis genes • Longevity-associated SNPs 	<p>DETOXIFICATION</p> <p>Heavy Metal Toxicity</p> <ul style="list-style-type: none"> • Comprehensive toxic burden analysis • Key metals: lead, mercury, arsenic, cadmium • Relevant to chronic fatigue & cognition • Guides targeted detox protocols 	<p>METABOLISM</p> <p>Organic Acid Analysis</p> <ul style="list-style-type: none"> • TCA cycle and mitochondrial function • Amino acid & fatty acid metabolism • B-vitamin and cofactor status • Neurotransmitter precursor markers
<p>REAL-TIME</p> <p>Wearable Physiological Data</p> <ul style="list-style-type: none"> • HRV and autonomic nervous system • Sleep architecture & WASO • Recovery trajectory over time • WHOOP / Oura integration 	<p>PERFORMANCE</p> <p>Continuous Glucose Monitor</p> <ul style="list-style-type: none"> • Time-in-range and glucose variability • Post-meal excursion patterns • Metabolic flexibility assessment • Where clinically indicated 	<p>COMING SOON</p> <p>Full Hormonal Profile</p> <ul style="list-style-type: none"> • Testosterone, DHEA-S, oestradiol • Cortisol axis and adrenal function • Thyroid: TSH, fT3, fT4, rT3 • SHBG, free hormone indices

You do not arrive with a list of tests you would like. You arrive with data. We determine what is missing, what is noise, and what is signal. The baseline is blood work and wearable physiological data. Both. Exceptions exist — we consider them individually, not by default.

PRECISION PROTOCOLS

What We Build for You

We do not sell protocols. We build them. If that distinction does not immediately make sense to you, it is worth sitting with before you apply.

Custom Oral Compounds

Formulated to your genomic and metabolomic profile. Compounded at our USP 797 laboratory in Bali — the only facility of this standard in Southeast Asia. Prescription codes protect every formulation.

Custom IV Protocols

IV alpha-lipoic acid, magnesium, taurine, B12, vitamin C, glutathione, and more. Formulated to your blood panel, not a standard drip menu. Administered at home by licensed professionals.

Ozone Therapy

Major autohemotherapy (IV hematological), minor hematological, and saline ozone infusion. Integrated with IV sessions. Prescribed only when your inflammatory and oxidative data supports it.

Peptide Protocols

BPC-157, TB-500, GHK-Cu, thymosin family, HPA reconstitution peptides. Custom blend pens for subcutaneous self-administration. Sourced from Mindtek — SEA's first clinical-grade peptide lab, 99%+ purity, HPLC-verified.

LUMIVEX™ Precursors

Dripdok's biofermented sublingual NMN + NR + Resveratrol. Formulated to your NAMPT suppression profile. Proprietary ratio — not a generic NMN supplement. Titrated to your organic acid and wearable response data.

Monitoring & Optimisation

90-day retest cycle with protocol refinement at every step. Bayesian update: each retest sharpens the mechanism map. DunedinPACE, OMICm, SYMPHONYAge tracking over time. Red-flag trigger system for unscheduled review.

“Intervention without empirical, objective insight is just guesswork. We have spent 18 years making that statement operationally true. Most clinics have spent the same period proving it.”

— Dr Anthony Close, Founding Physician

HOW TO APPLY

Not Everyone Is Accepted.

1. Submit your data

Blood work and wearable physiological data are the baseline. Both. Not one or the other. Additional panels — neurotransmitters, epigenetics, genetics — sharpen the picture. Send what you have. We will tell you what is missing.

2. Dr Anthony Close reviews it personally

Not a coordinator. Not a form. Dr Close reviews your submission directly and responds within 48 hours. If your data is insufficient or the fit is wrong, we will say so. We would rather decline a case than build a protocol without the data to justify it.

3. The conversation

Twenty to thirty minutes. We tell you what the data shows, what it does not show, and what we would build from it. You will learn something about your biology regardless of whether you proceed.

4. If we accept your application

Full CRI analysis. Every domain of your biology, read in sequence. A protocol that exists only because your data created it. This is not a template with your name on it.

ABOUT

Dr Anthony Close

ASCA · SCSC · Regenerative Health Specialist

BSc Analytical Chemistry · MSc Molecular Genetics

An undergraduate foundation in analytical chemistry and postgraduate specialisation in molecular genetics means the data is read at the pathway level — not just checked against a reference range. Most practitioners do not have this training. It changes what you see.

Founder of **LabMe Analytics** — the first direct-to-consumer diagnostic platform in Southeast Asia, and the first in the region to deliver clinical-grade blood analysis to patients at home. 18 years of frontline practice in physical medicine, chronic pain management, and regenerative science.

dripdok.com

In association with USP 797 compounding labs in Indonesia, Malaysia, Tokyo & USA

Southeast Asia · Global Remote Consultations

Founder: Dripdok · Mindtek · LabMe Analytics

The protocols we build are precise. They require data, and they require a patient who will engage with the process rather than simply consume the outcome. We give equal weight to both. If you arrive with years of panels, wearable data, and a genuine interest in understanding your biology — we are probably a good fit. If you arrive without data and with strong opinions about what you need, we probably are not.

The application exists for a reason. So does the review process.
